

LAPILUZ

ALFALFA DEHYDRATED IN PELLETS

The benchmark alfalfa
for rabbits

Désialis

A natural source of protein, rich in vitamins and minerals, alfalfa has multiple nutritional benefits that are stabilised and preserved by the process of dehydration (link to process).

LAPILUZ is a product that has been specifically developed for its protein content and nutritional value, to meet the needs of rabbits.

CONTRIBUTES TO THE GOOD HEALTH OF RABBITS

LAPILUZ contributes to the good health of rabbits

As a source of digestible (**cellulose**) and indigestible (**lignin**) fibres, alfalfa is one of the few raw materials that can be distributed to rabbits on its own and exclusively. LAPILUZ, with its guaranteed **raw fibre content**, is an **ingredient of choice in the development of feedstuffs** to ensure the digestive health of animals.

EASILY INCORPORATED INTO RABBIT FEEDSTUFFS

Easy to use, LAPILUZ can be very easily incorporated and optimised in **all types of feedstuff formulas** corresponding to different stages of rabbit breeding: from maternity through to finishing.

Thanks to our unique know-how, the composition of Lapiluz is guaranteed throughout the year for the criteria of raw protein and raw fibre.

LAPILUZ is easily incorporated into rabbit feed

UNIFORM AND TRACEABLE QUALITY

LAPILUZ is elaborated under a unique industrial process: the assurance of a homogeneous quality and traced

For the better quality of our dehydrated alfalfa, we observe the cutting schedule in order to **harvest a plant in a vegetative state** that is best suited to the manufacture of our different products.

The unique organisation of our industrial storage facilities allows us to **homogenise production batches and, after analysis, to optimise the formulation of our alfalfa products**. Each shipment batch of LAPILUZ is identified and traced and for each load (truck), a sample is taken and kept for analysis if required.
