

MAÏLUZ

ALFALFA & CORN DEHYDRATED IN THE SAME PELLET

Complementary energy sources in a
single pellet

Désialis

Mailuz's production process **preserves all the initial qualities of alfalfa and corn**

DIVERSIFIES ENERGY SOURCES

The combination of alfalfa and corn in a single product, MAILUZ, **helps to improve the efficiency of the ration** by providing energy in the form of starch (slowly digestible starch) and in the form of digestible cellulose, and thus provides:

- **Balance of the amylolytic and cellulolytic flora of the rumen,**
- **Improvement in the intake and digestion of forage,**

MAILUZ is suitable for the **growth and maintenance phases**.

Diversified sources of energy without deconcentrating the ration

IMPROVES GOOD RUMEN FUNCTION

A supply of vitamins and minerals

In addition to its **good energy/protein balance**, the alfalfa proteins and corn starch it contains both have the particularity of being slowly degradable.

There is no risk of runaway fermentations of the ruminal microflora that can lead to metabolic diseases.

PROMOTES ANIMAL HEALTH

MAILUZ is **rich in minerals, trace elements and sources of vitamins** (especially beta-carotene and vitamin E).

These essential nutrients have a **beneficial effect on the health and fertility of animals**.

Proteins and energy with slow degradation

**ALFALFA AND DEHYDRATED WHOLE PLANT CORN
IN THE SAME GRANULE**
